

## GLOBAL IPv6 SERVICE LAUNCH EVENT

Large scale field trials  
as part of a broader  
strategy

**Brussels, 15-16 January 2004**

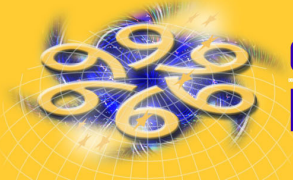

# Large scale field trials...

Integrating and validating the technology in the context of user driven testbeds.

- From laboratory bench into the real world - reaching scale and critical mass.
- Integrating different technologies.
- Involving users in a proactive way - providing integrated solutions.
- Synergies between different classes of actors – Operators, Manufacturers, ISPs, Research Networks, Academia,...

**In Europe, good adherence to this model!**

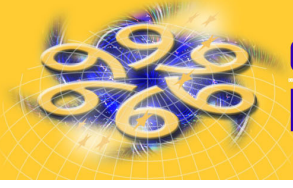

## ... As part of a broader strategy...

Large scale trials (6Net, Euro6IX) to be complemented by good:

- Underlying infrastructures (e.g. GÉANT).
- Clustering mechanisms (e.g. IPv6 cluster).
- Dissemination/showcases (e.g. Eurov6).
- Policy initiatives (e.g. IPv6 Task Force) and compliance requirements.
- International cooperation and standardisation
- Benchmarking, awareness raising, training and education

**In Europe, portfolio of projects is quite complete and coherent!**

# Today users... Tomorrow customers...

Large scale field trials... just before large scale deployment...

- Building clear business cases for main actors (further work needs to be done).
- Attracting users in a proactive way (role of Research Networks, user communities, deployment of applications and services, incentives, ...)
- Involving industry
- Applying a global strategy

**In Europe, main projects are ready to be active promoters!**
